

QUESTION 1

The first step is to identify the problem. In this case, the problem is to find the area of a square. The side length of the square is given as 5 units. To find the area, we use the formula for the area of a square, which is side length squared. So, the area is 5 squared, which equals 25 square units.

The second step is to check the units. The side length is in units, so the area should be in square units. The answer is 25 square units.

The third step is to verify the answer. We can check the answer by using a different method. For example, we can use the formula for the area of a square, which is side length squared. So, the area is 5 squared, which equals 25 square units. This confirms that the answer is correct.

The fourth step is to conclude the solution. The area of the square is 25 square units.

The final step is to write the answer. The area of the square is 25 square units.

The answer is 25 square units.

The area of the square is 25 square units.

The area of the square is 25 square units.
