Q1. What are the main components of the system? (20 marks)

A. The system consists of several key components: the user interface, the database, the server, and the client. Each component plays a crucial role in the overall functionality of the system.

Q2. Explain the role of the database in the system. (10 marks)

A. The database is responsible for storing and retrieving data. It acts as the central repository for all information used by the system.

Q3. How does the server interact with the client? (10 marks)

A. The server and client interact through a network. The client sends requests to the server, and the server responds with data or services.

Q4. Describe the user interface and its importance. (10 marks)

A. The user interface is the point of interaction between the user and the system. It is essential for providing a user-friendly and accessible experience.

Q5. What are the security considerations for this system? (10 marks)

A. Security considerations include protecting data from unauthorized access, ensuring data integrity, and implementing strong authentication mechanisms.

Q6. How can the system be scaled? (10 marks)

A. The system can be scaled by adding more servers, optimizing database performance, and using cloud services for flexible resource allocation.

Q7. What are the future development goals for this system? (10 marks)

A. Future development goals include enhancing the user interface, improving system performance, and integrating new features to meet evolving user needs.
