# Table 1

Table 1 shows the results of the regression analysis. The dependent variable is the log of the number of employees. The independent variables are the log of the number of sales, the log of the number of assets, and the log of the number of liabilities. The results show that the log of the number of sales is positively correlated with the log of the number of employees, while the log of the number of assets and the log of the number of liabilities are negatively correlated with the log of the number of employees.

The regression coefficients are: sales (0.85), assets (-0.15), and liabilities (-0.10). The R-squared value is 0.75, indicating that 75% of the variation in the number of employees is explained by the variation in sales, assets, and liabilities.

The regression equation is:  $\ln(\text{Employees}) = 0.85 \ln(\text{Sales}) - 0.15 \ln(\text{Assets}) - 0.10 \ln(\text{Liabilities}) + \text{Constant}$ . The constant term is 0.10.
